

KVM, Windows Server 2019, Samba, et Active Directory

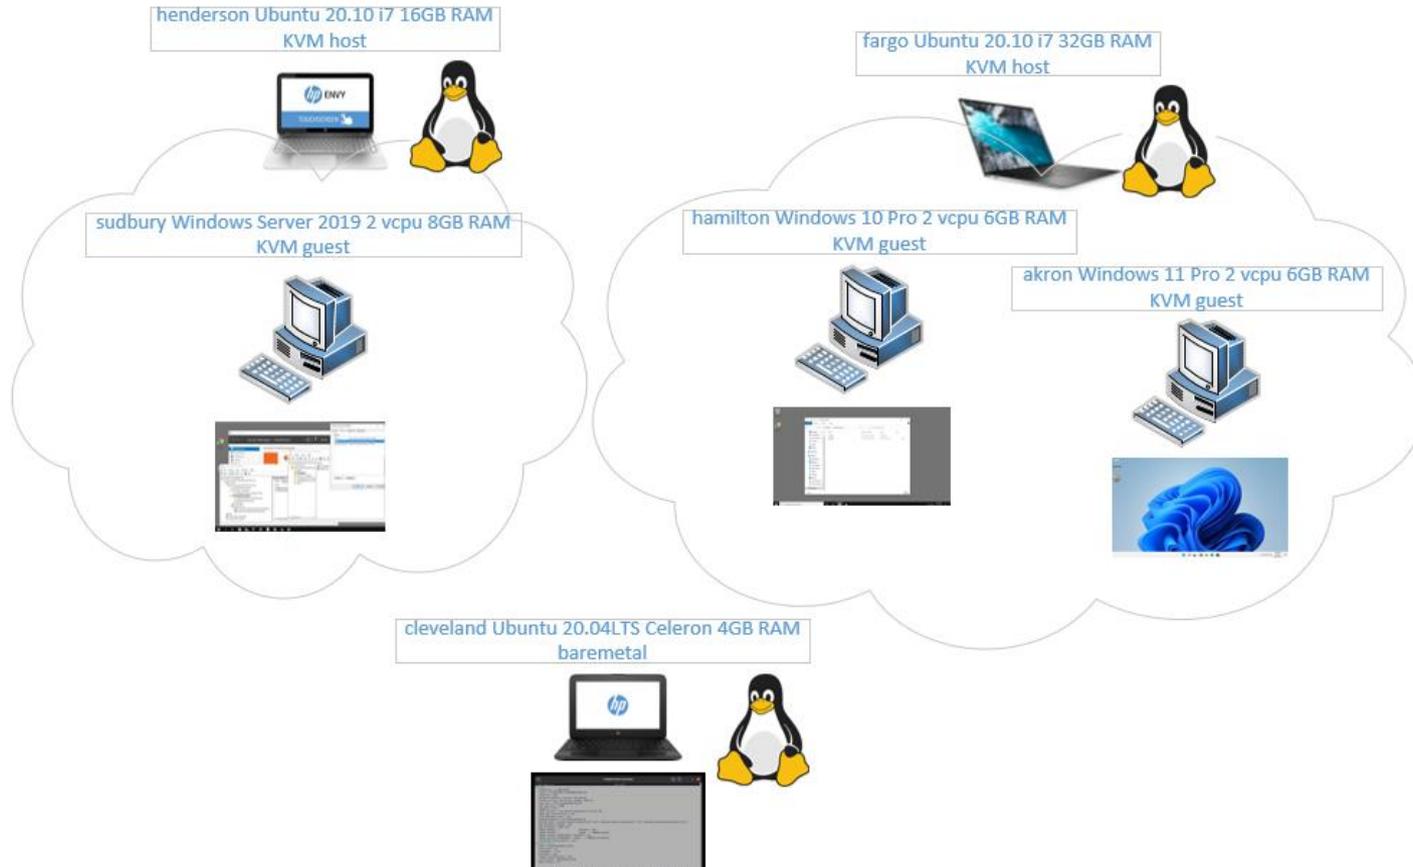

Candidats remplacement

Catégorie	Pratique actuelle de l'industrie	Alternative open source	Commentaire
Directory	Active Directory	389 Directory Server, Samba AD controller	Pas pratique. rencontrera des résistances au sein de l'entreprise.
Hypervisor	VMware ESX ou Hyper-V	KVM/Qemu/libvirt/virt-manager	<p>Fonctionnalité équivalente, aucun changement dans l'expérience Windows Server 2019.</p> <p>Nous sommes dans un cycle de remplacement pour les installations VMware.</p> <p>La concurrence devrait être entre Hyper-V et KVM pour remplacer VMware.</p>
Stockage/partages	Windows Server 2019 File and Print Sharing ou Synology NAS sous Active Directory	Samba sous Active Directory	<p>Fonctionnalité équivalente, aucun changement dans l'expérience d'un PC joint au domaine en accédant à un partage.</p> <p>Synology NAS valide déjà notre approche avec Samba et Active Directory.</p>

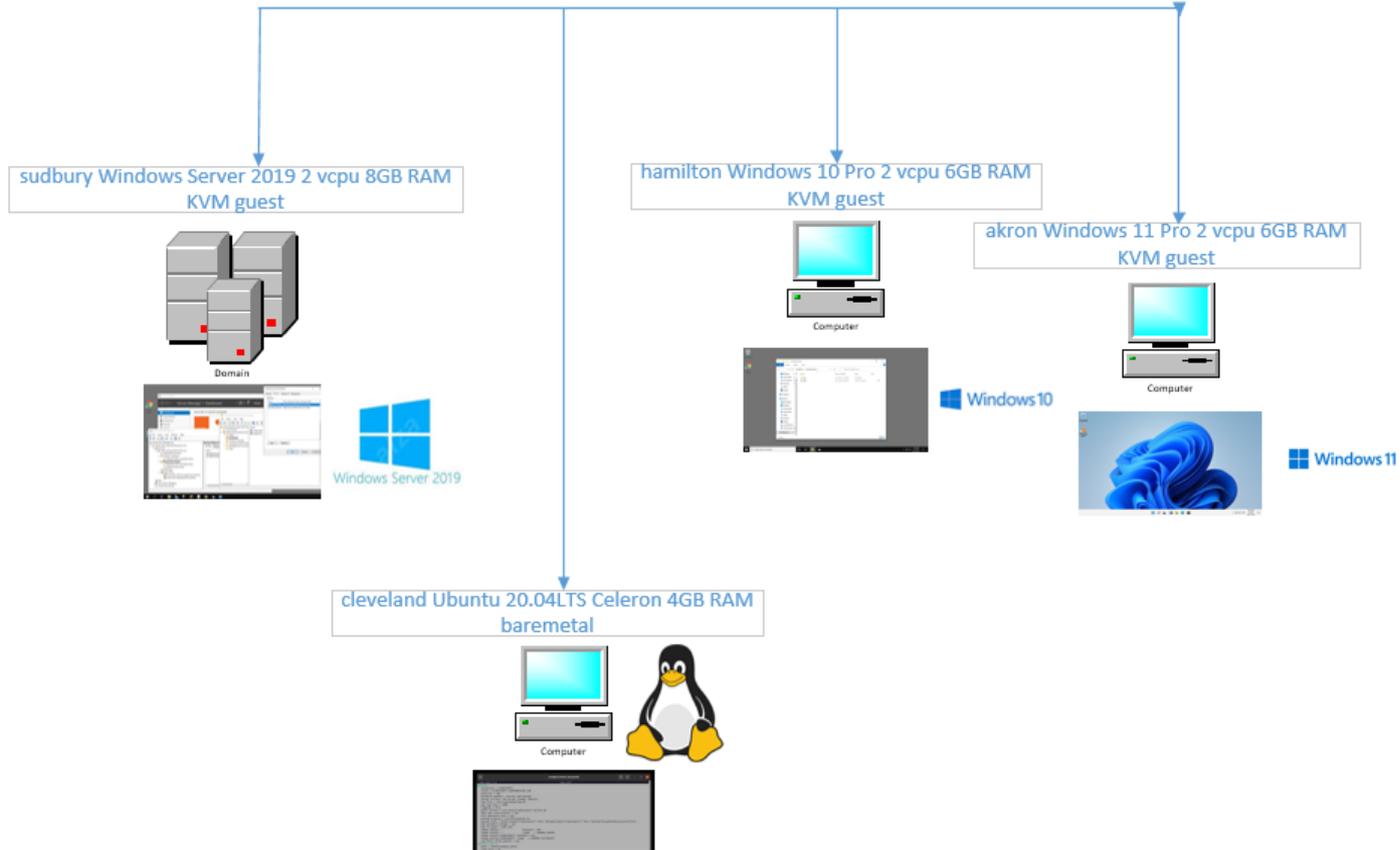

Réseau de test physique

Réseau de test logique

Considérations installation VM de Windows Server 2019

- 👉 cartes réseau: créer carte réseau
- 👉 macvtap bridge mode, désactiver carte NAT
- 👉 adresse IP statique
- 👉 désactiver DHCP Server sur Windows Server 2019 après déclaration du domaine
- 👉 configuration DNS
- 👉 fichiers `/etc/hosts`
et `/windows/system32/drivers/etc/hosts`

Windows Server 2019 invité virtuel sous KVM

A screenshot of a Windows Server 2019 virtual machine running on KVM. The interface shows the Server Manager dashboard with several open windows. The "Active Directory Users and Computers" window displays a list of computers: AKRON, CLEVELAND, and HAMILTON. The "Group Policy Management" window shows the hierarchy for the domain clarkcounty.gordonbuchan.com. The "clarkcounty.gordonbuchan.com" status window shows details for Active Directory and SYSVOL replication. The taskbar at the bottom shows the time as 8:30 AM on 7/4/2021. The window title bar indicates the VM is named "sudbury on QEMU/KVM" and is running on a host named "henderson.local".

Windows 10 ou 11 Pro Join Domain

- ➔ joindre PC au domaine Active Directory
- ➔ cartes réseau: créer carte réseau
- ➔ macvtap bridge mode
- ➔ adresse IP statique
- ➔ configuration DNS
- ➔ fichier `/etc/hosts`

Synology NAS est validation de Samba et Active Directory

Samba et Active Directory Configuration 1/2

```
sudo su hostnamectl set-hostname myubuntu.example.com
hostnamectl set-hostname cleveland.clarkcounty.gordonbuchan.com
systemctl disable systemd-resolved
systemctl stop systemd-resolved
unlink /etc/resolv.conf
cd /etc
nano resolv.conf
apt -y install realmd libnss-sss libpam-sss sssd sssd-tools adcli samba-common-bin oddjob oddjob-mkhomedir packagekit
realm discover clarkcounty.gordonbuchan.com
realm join -U adminbuchang clarkcounty.gordonbuchan.com
realm list
cd /usr/share/pam-configs/
nano mkhomedir
pam-auth-update
cd /etc/sss
cp sssd.conf sssd.conf.factory
nano sssd.conf
systemctl restart sssd
systemctl status sssd
id gordon.buchan
id adminbuchang
```

Samba et Active Directory Configuration 2/2

```
cd /etc
nano sudoers
nano group
visudo
groupadd linux_sudoers
apt install samba
cd /etc/samba
cp smb.conf smb.conf.factory
nano smb.conf
net groupmap add sid=S-1-5-32-546 unixgroup=nogroup type=builtin
apt install acl
cd /home
mkdir example_share
chmod 2770 /home/example_share
chown root:example_group /home/example_share
setfacl -m g:example_group:rwx,d:g:example_group:rwx /home/example_share
getfacl /home/example_share
systemctl enable smb
systemctl start smb
```

/etc/resolv.conf

Linux-Meetup

```
# Generated by NetworkManager
search clarkcounty.gordonbuchan.com
# nameserver 127.0.0.53
nameserver 192.168.56.80
```

gordonbuchan.com

/etc/sudoers.conf

```
#  
# This file MUST be edited with the 'visudo' command as root.  
#  
# Please consider adding local content in /etc/sudoers.d/ instead of  
# directly modifying this file.  
#
